

# WIRE BONDABLE BURIED SINGLE LAYER CAPACITORS

## PRESIDIO ADVANTAGE

- ◆ Presidio's patented thick film technology buries electrodes into the ceramic body (Fig. 1) allowing a 10:1 advantage over a conventional construction (Fig. 2). It offers the designer: (a) more bandwidth through increased device capacitance, (b) more stable capacitance over temperature and (c) more capacitance in smaller case sizes for increased board density.

Filled vias connect the buried electrodes with the outside top and bottom metallization pads; 99.95% pure Au is standard for all metal connections allowing proven wire bond techniques with AuSn or conductive epoxy die attach techniques.

- ◆ Excellent low loss performance for high Q applications as demonstrated with a 10 pF NPO capacitor shown in Fig. 6 below.
- ◆ Ease of dielectric material selection: Presidio offers 3 ceramic materials while most other suppliers offer more than 15.
- ◆ RoHS compliant.

## KENT SIMULATOR

Using the KENT SIMULATOR (Fig. 3), a designer can obtain commonly needed RF capacitor parameters in graphical format for popular Presidio Components RF capacitors. In addition, S-parameters for selected capacitors can be saved in S2P format. All device parameters are derived from a series transmission line model developed by Dr. Gordon Kent and available at [www.presidiocomponents.com](http://www.presidiocomponents.com). A technical discussion of the simulation used in the Kent Simulator is presented by Gordon Kent in the "Summary of the Capacitor Simulator."

## TYPICAL APPLICATIONS

### FILTER CAPACITOR

A filter design requires a specific capacitance value,  $C_F$ , and at the upper end of the filter response,  $f_F$ , the effective capacity must not exceed  $C_F$  by more than a specified amount of  $\Delta C$ . Once  $C_F$  is determined, case size, voltage rating and temperature characteristics can be selected. Typically, lower loss Class I materials like NPQ and NPO are first choice. See Fig. 4.

### RESONANCE-FREE BROADBAND COUPLING/DECOUPLING CAPACITOR

Class II "BX" dielectric is typical for DC block or RF bypass applications to operate resonance free over a specified broad frequency range. Low impedance is typically more important than the capacitance value which should be large enough to cover the 3 dB low edge of the bandwidth. See Fig. 5.

### MINIMUM LOSS, FINITE BAND COUPLING CAPACITOR

When minimum loss is required, e.g. a low noise circuit, a high Q capacitor with Class I dielectric (NPQ or NPO) is recommended. Any parallel resonance frequency of the capacitor should be outside of the use frequency band. The best capacitor choice puts the series resonance at the band center (approximately  $f_0 / 2$ ). See Fig. 6.

\*FIT (Failure In Time) Calculations are based on assumed CONTINUOUS operating temperatures 65° C, 85° C and 100° C

### Termination Configuration Codes

| Code | Description                              | A | B | C |
|------|--|---|---|---|
| A    | Borders top and bottom                   |   |   |   |
| B    | Borders top, full metalization at bottom |   |   |   |
| C    | Fully metalized top and bottom           |   |   |   |

### Capacitance Codes

First two digits = Significant figures of capacitance in picofarads  
 Third digit = Additional number of zeros  
 Example: 0R1 = 0.1 pF    100 = 10 pF  
 1R0 = 1.0 pF    101 = 100 pF

### Capacitance Tolerance Codes

| Code | Tolerance | Cap Range | Dielectrics |
|------|-----------|-----------|-------------|
| A    | ± .05 pF  | < 2.2 pF  | NPQ, NPO    |
| B    | ± .1 pF   | < 10 pF   | NPQ, NPO    |
| C    | ± .25 pF  | < 10 pF   | NPQ, NPO    |
| D    | ± .5 pF   | < 10 pF   | NPQ, NPO    |
| G    | ± 2%      | > 9.1 pF  | NPQ, NPO    |
| J    | ± 5%      | > 9.1 pF  | NPQ, NPO    |
| K    | ± 10%     | > 0.45 pF | all         |
| M    | ± 20%     | > 0.45 pF | all         |

### Working Voltage

| Code | WVDC | Code | WVDC |
|------|------|------|------|
| 3    | 100  | G    | 16   |
| 2    | 50   | F    | 12   |
| 1    | 25   | E    | 10   |
|      |      | C    | 6.3  |

### Termination Codes

| Code | Material               | Wire | Attachment               |
|------|------------------------|------|--------------------------|
| H    | 99.8% Au               | Au   | Conductive Epoxy or AuSn |
|      | 100 μin min. thickness |      |                          |

### RoHS

| Code | Compliant                 |
|------|---------------------------|
| N    | No                        |
| R    | Legacy, ended 2012        |
| C    | Yes, started January 2013 |

# A WORD TO THE DESIGN ENGINEER

After the design work is done, outsourcing manufacturing on a global basis is a management option. At Presidio Components, we are striving for complete customer satisfaction which includes “after” service for all of our products.

We added a “Design In” locator code for quick traceability, if needed. Please select your location from the list below and add the appropriate code at the end of the part number.

If you need assistance give us a call at **(858) 578-9390** or email us at **info@presidiocomponents.com**.
